

Task 8

Triggers, Views and Exceptions

Part 1: Implementing Triggers

1. Prevent Insertion of underage students

```
CREATE TABLE students (  
  StudentID NUMBER PRIMARY KEY,  
  Name VARCHAR2(50),  
  Age NUMBER,  
  Department VARCHAR2(50)  
  Marks NUMBER  
);
```

EXPECTED OUTPUT: Table Created

```
CREATE OR REPLACE TRIGGER prevent_underage_students
```

```
BEFORE INSERT ON students
```

```
FOR EACH ROW
```

```
BEGIN
```

```
  IF :NEW.Age < 18 THEN
```

```
    RAISE_APPLICATION_ERROR (-20001, 'Age must be 18 or above');
```

```
  END IF;
```

```
END;
```

```
/
```

2. Create a log table

```
CREATE TABLE student login (  
  LogID NUMBER PRIMARY KEY,  
  StudentID NUMBER,  
  Actiontype VARCHAR(20),  
  ActionData TIMESTAMP DEFAULT SYSTEM STAMP  
);
```

Part 2 : Creating Views

1. View for top students

```
CREATE OR REPLACE VIEW view_Top students AS  
SELECT student ID, name, marks  
FROM students  
WHERE Marks > 80;
```

2. View for Department Summary

```
CREATE OR REPLACE VIEW view_Top students AS  
SELECT Department, count AS Total students,  
  ROUND(AVG(MARKS)) AS Average Marks  
FROM students  
GROUP BY Department;
```

Part 3 : Exception Handling

1. Procedure with exception handling for inserting student records.

```
CREATE OR REPLACE PROCEDURE InsertStudent(
```

```
    P_studentID IN NUMBER,
```

```
    P_name IN VARCHAR2,
```

```
    P_age IN number,
```

```
    P_department IN VARCHAR2,
```

```
    P_marks IN NUMBER
```

```
);
```

```
IS BEGIN
```

```
    INSERT INTO students (studentID, Name, Age, Department, Marks)
```

```
VALUES (P_studentID, P_name, P_age, P_department, P_marks);
```

```
DBMS_OUTPUT.PUT_LINE ('Record Inserted Successfully');
```

```
EXCEPTION
```

```
    WHEN OTHERS THEN
```

```
        DBMS_OUTPUT.PUT_LINE ('Error: ' || SQLERRM)
```

```
END;
```

```
/
```

Q. Function to fetch student details with error handling.

```
CREATE OR REPLACE FUNCTION GetstudentDetails (p_student ID IN  
NUMBER)
```

```
RETURN VARCHAR2
```

```
IS
```

```
student_info VARCHAR(255);
```

```
BEGIN
```

```
SELECT 'Name': || Name || 'Age' || Age || ', Department' ||  
Department || ', Marks', || Marks
```

```
INTO student_info
```

```
FROM students
```

```
WHERE student ID = p_student ID;
```

```
RETURN student_info;
```

```
EXCEPTION
```

```
WHEN NO_DATA_FOUND THEN
```

```
RETURN 'student not found',
```

```
WHEN OTHERS THEN
```

```
RETURN 'Error; ' || SQLERRM;
```

```
END;
```

```
/
```

Result: Thus the SQL query is executed and verified suc
